LinkedIn: linkedin.com/in/scotty-peterson | Portfolio: scottpeterson.net

SUMMARY

Marketing operations manager who owns the systems and production infrastructure that make marketing run. Built full CRM, lifecycle, and campaign infrastructure from scratch, no engineering team, no prior automation. Uses AI daily to cut production timelines and has specific workflows and real time saved to show for it.

Core Competencies: Marketing Operations • Lifecycle Marketing • CRM Systems • Campaign Operations • AI-Powered Workflows • Email Automation • Audience Segmentation • Experiment Infrastructure • Production Calendar Management

Technical Stack: Brevo, Pipeline CRM, Stripe, Calendly, MJML, AWS (Lambda, S3, SES), Python, JavaScript, REST APIs, Webhooks, Cursor, Claude

EXPERIENCE

Training & eTracking Solutions | Remote

Marketing Operations & Lifecycle Engineering | July 2024 – June 2026

Sole owner of marketing operations at a B2B SaaS company. Built the entire CRM, lifecycle, and campaign infrastructure from nothing. No prior automation, no engineering team, no existing processes.

CRM & Lifecycle Systems

- Architected and owned the full CRM and lifecycle system connecting Brevo, Pipeline CRM, Stripe, and Calendly via API integration and webhook orchestration, configured and maintained over two years
- Built behavioral trigger sequences that identify leads who click a demo booking link without completing it, then run an automated recovery sequence until they book or opt out. Over 1,200 contacts processed without manual monitoring.
- Built B2C post-purchase email automation with merge-not-retrigger logic for customers who purchase multiple times mid-sequence, solving a state management problem that had been handled manually

- Built lead capture and routing system covering form ingestion, real-time attribution tagging, CRM sync, and demo nurture sequences that stop automatically the moment a prospect books

Launch Operations & Repeatable Playbooks

- Built webinar registration system handling 7 events and 1,900+ registrations end-to-end: landing pages, audience segmentation, multi-event deduplication, confirmation automation, calendar adds, and progressive profiling surveys. Built once as a reusable system, deployed across all seven events.
- Owned campaign production calendar and QA process across 187 campaigns delivered to 2M+ recipients last year, responsible for setup, audience logic, rendering, link tracking, and pre-send validation
- Built and maintained MJML email templates with dynamic personalization and variable-based content across multiple campaign types

AI-Powered Workflow Compression

- Built development environment around Claude and Cursor with maintained context documents, reusable prompt patterns, and integration templates that collapsed new workflows from days to hours
- Automated weekly business review reporting that previously required hours of manual data assembly. It now auto-generates key metrics from live data across Mercury, Stripe, and Pipeline CRM.
- Built internal tooling suite in Next.js and Flask covering finance dashboards, Freshdesk analytics, email automation monitoring, and invoice generation, eliminating recurring manual reporting across the operations team

Experiment Infrastructure

- Designed and documented full lifecycle architecture in Figma for cross-team reference and onboarding
- Built UTM tracking and attribution structure across campaigns, enabling performance analysis by channel and campaign type
- Configured A/B test infrastructure within lifecycle sequences to track engagement lift by subject line and send timing

Liquid XYZ | Remote

Contract Web Developer / April 2023 – July 2024

- Built and maintained yourtrainingprovider.com full stack (React and Flask): blog, webinar registration pages, lead capture forms, and expert directory
- Built a custom in-house CMS from scratch covering blog post creation, ad injection into content, tag-based training recommendations, and expert profile management, eliminating engineering dependency for content operations

EDUCATION

Flatiron School | Software Engineering Certification | 2022

Full-stack web development intensive: JavaScript, React, Ruby on Rails, SQL, PostgreSQL
