Professional Summary

Full-stack software engineer and web developer who builds scalable solutions that solve real business problems. Currently leading an enterprise healthcare compliance SaaS platform serving 5 states while managing high-traffic websites generating thousands of monthly visitors. Proven expertise in modern JavaScript frameworks (React, Next.js), backend development (Django, Python), cloud infrastructure (AWS), and AI integration workflows. Unique background transitioning from customer service to software development brings user-focused problem-solving to technical solutions. Specializes in building complete end-to-end business applications from concept to production deployment, with deep experience in full-stack web development, API development, AI automation, and database design. Leverages AI-assisted development tools and prompt engineering to deliver high-impact software projects that drive measurable business results and cost savings.
