SUMMARY

Lifecycle marketing engineer who designs and ships the technical systems behind marketing automation programs. End-to-end ownership of lead capture, CRM integration, email automation, post-purchase nurture sequences, and webinar registration infrastructure. Connect marketing platforms, CRMs, payment systems, and scheduling tools into automated customer journeys that run without manual intervention. Lean heavily on AI-assisted development to ship at the pace of a small engineering team.

Core Competencies: Lifecycle Marketing • Marketing Automation • Marketing Operations • Email Marketing • Customer Segmentation • Marketing Technology (MarTech) • AI-Assisted Development

Technical Stack: Brevo, Pipeline CRM, Stripe, Calendly, MJML, HTML, Python, JavaScript, REST APIs, Webhooks, PostgreSQL, AWS (Lambda, S3, SES), Power Automate, Cursor, Claude

EXPERIENCE

Training & eTracking Solutions | Remote

Technical Marketing & Lifecycle Engineering | February 2024 – June 2026

Sole owner of marketing technology at a B2B company. Built the entire lifecycle automation program from nothing: no prior automation, no engineering team, no existing infrastructure.

Lifecycle Marketing & Automation Infrastructure

- Designed and built lifecycle marketing program connecting Brevo, Pipeline CRM, Stripe, and Calendly via API integration and webhook orchestration
- Designed B2B lead journey covering form capture, attribution tagging, demo nurture email sequences, and Calendly-driven booking with cross-system attribution preservation
- Built behavioral trigger sequences that identify leads who click a demo booking link without completing the booking, then run an automated recovery sequence until they book or opt out: 1,200+ contacts processed, ~14% booked a demo
- Built B2C post-purchase email automation with merge-not-retrigger logic for customers who purchase multiple times mid-sequence
- Built webinar registration system handling 7 webinars, 1,900+ registrations, with audience segmentation, multi-webinar deduplication, and confirmation automation including calendar adds and progressive profiling surveys
- Program delivered 187 campaigns totaling 2M+ sends last year

Marketing Engineering & AI-Assisted Development

- Built an AI assisted campaign build workflow using persistent context files with component libraries and style guides: reduced campaign setup from 1+ hour to under 30 minutes per send

- Build API integrations, webhook handlers, and landing pages in Cursor using maintained context documents for company styling, brand guidelines, and integration patterns, shipping new templates and integrations significantly faster than writing from scratch
- Build responsive email templates in MJML with dynamic personalization and variable-based content
- Manage AWS infrastructure (Lambda, S3, SES) for marketing automation and email delivery
- Designed and documented full lifecycle architecture in Figma for cross-team reference

Internal Tooling & Reporting

- Built closed-loop attribution tracking from email send to booked demo: UTM capture on click, webhook on booking that creates or updates the contact in Pipeline CRM, and a Power Automate automation that pulls campaign data from Brevo and UTM data from Pipeline, then writes it to a shared Excel sheet for reporting. Demo booking volume increased roughly 25% over the first year of the program.
- Built a suite of internal tools in Next.js + Flask: finance dashboards connected to Mercury, Stripe, and Pipeline CRM; Freshdesk analytics; email automation monitoring; invoice generation; and weekly business review reporting that auto-generates key metrics

Marketing Site & Content Infrastructure

- Built yourtrainingprovider.com from scratch (React + Flask): blog, lead capture forms, and expert directory
- Built a custom in-house CMS with blog publishing, ad injection, tag-based content recommendations, and expert profile management
- Created and published blog content regularly

Freelance Web Developer | Remote

2022 – 2024

- Built and launched a WordPress site for Saturo Sound, an independent record label
- Built a set of web pages for LiquidXYZ, handling layout, styling, and responsive markup
- Built web pages for Wolfpit Elementary School

EDUCATION

Flatiron School | Software Engineering Certification | 2022 Full-stack web development intensive

- Frontend: JavaScript, React
- Backend: Ruby, Ruby on Rails, SQL
